How the Companions Interlock as a System

The companion documents divide the surrounding conceptual space cleanly without stepping on each other's toes:

Companion Document	Primary Architectural Role Relative to the framework	Key Interlocks with Other Companions & Core Chapters
Vertical Evolution	**Pre-Framework Genesis ($t < t_0$):** Explains how *Homo sapiens* moved from horizontal networks to vertical offices ($\tau_{inst} \gg \tau_b$) and how medieval/early-modern Europe decoupled urban institutional persistence from biological mortality via **modular maintenance topology** and **replacement elasticity (ε_R)**.	Sets up the initial condition (t_0) of Chapter 2; explains *why* human schemas experience vertical hysteresis (linking to *Social Trust Sensor* and *Faith mapping*) and why vertical states outlaw decomposers, forcing late-stage decomposition into illicit Chapter 12 centripetal scavenging ($N_{i,capture}$).
Social Trust Sensor	**Micro-to-Macro Observational Sensor (Ch. 9–12 Bridge):** Formalises the directional observation operator *T_L(i -> j | d, H, t)* across $\tau_{autonomic}$, τ_{sig}, and τ_{schema}, the Bolting-Horse Principle, and the four-dimensional topology of prosthetic safety enclaving (B_{sub}).	Supplies the exact Three-Clock telemetry used by *Faith mapping*, *Cultural mapping*, and *Total War* to measure divergence between official continuity claims (C_i on τ_{schema}) and practical hedging (V_i on τ_{sig}).
Narrative mapping	**Epistemic & Operational Filter (Ch. 2, 4, 14 Bridge):** Separates **Narrative** (social continuity regulation optimising for low P_{vig} and GUTS inhibition) from **Strategy** (constrained state-transition policy governed by physical rate limits and the 5-stage commitment pipeline).	Distinguishes Type I Adaptive Reconfiguration from Type II Strategic Extraction ($N_{i,capture}$ in Ch. 12); provides the Stage 1–5 verification quarantine required by Chapter 14 and Total_War.

Faith mapping	**Macro-Coordination Bundle (Ch. 4.7, 9–12 Bridge):** Decomposes religions and secular ideologies into **five functional components** and **two structural governors** (orchid sanctuaries and administrative caps), tracing how they fuse in $dB/dt > 0$ and shear apart across clocks in $dB/dt < 0$.	Connects Chapter 4.7 (Continuity Technologies / PCC), Chapter 10 (Chwe common-knowledge rituals), and Chapter 11 (Σ_{care}) to Social_Trust_Sensor (CREDs on τ_{sig}) and Cultural_mapping (portable survival kits a_{next}).
Cultural mapping	**Counterfactual Search & Pre-Compilation (Ch. 4, 10, 12 Bridge):** Models fiction, games, and subcultures as offline state-space search ($M_0 \rightarrow M_i$) that bifurcates into **Regime A (Flight Simulator, $\boldsymbol{dK_i/dt > 0}$)** vs. **Regime B (Supernormal Placebo Trap, $\boldsymbol{dK_i/dt \leq 0}$)** and a 4-stage elite conversion pipeline ($a_{next}(t)$).	Explains how populations bridge Chapter 4's *Successor-State Exclusion* to reach Chapter 12's $N_{i,exit}$ or $N_{i,capture}$; cross-references Social_Trust_Sensor directly as its sister telemetry array.
Total War	**Antagonistic Perturbation Extension (Ch. 13–14 Bridge):** Expands Chapter 13 into six state-space vectors of exogenous canopy–substrate decoupling, introducing the **Gatekeeper Paradox (Dependency Inversion)** and the five boundary conditions required to sever $b(t)$ from $a(t)$.	Directly applies Kalyvas's local control/protection mechanics, *Social Trust Sensor*'s CRED divergence, and *Cultural mapping* / Ch. 9's orchid exit-for-voice drain to interstate war, civil war, and economic siege.
